WHO WE ARE

Smart card and transponder specialists

Cardag Deutschland GmbH specializes in the development, design, manufacturing and sale of high quality and long lasting contactless, contact and dual-interface smart cards as well as special transponders. All used material compositions have been developed by our own R&D. They meet diverse customer requirements and are completed by customized card printing or various security additives. Completely programmed microprocessor chips enhance the integration in secure environments and ease further system integration for our customers.

Cardag develops, designs, and manufactures contactless cards.

OUR CORE COMPETENCIES

Contactless cards: fast, convenient, reliable

Products made by Cardag are used worldwide in markets such as public transportation, secure physical and logical access, parking, and industrial environments. Contactless cards from Cardag hold several certifications, for example from Arsenal or ITSO. This versatility is made possible by our highly automated in-house production process with strong vertical integration. It starts with our own module manufacturing via antenna and card production of up to 100% electrically tested units. Encoding on various security levels assists usage in secure environments and eases further system integration. Due to our active influence over every manufacturing step we realise customer-specific requirements while offering high flexibility and reliability in production process and lead time.
